5 February 1963

CURRENT INTELLIGENCE MEMORANDUM

SUBJECT: Status of Nuclear Storage Facilities in
Cuba

1. There has been no indication of further construction at any of the nuclear storage facilities since 1 November 1962. At that time, preparation for storage of nuclear warheads was well advanced at three of the IRBM sites (Guanajay #1 and #2 and Remedios) and at five of the MRBM sites (Sagua La Grande #1 and #2, San Cristobal #1, #3, and #4). The storage facility at MRBM site San Cristobal #2 was not under construction but the materials were on hand at the site. In each instance, the storage facility under construction was located so as to service the launch pads at the two sites of each strategic missile complex.

2. In no instance has any of these storage facilities been completed since the withdrawal of the offensive missiles from Cuba. There has also been no move noted to dismantle or destroy these facilities.
